# MOBEYE INTERNET PORTAL

Mobeye CML2055 Voltage Logger

Mobeye alarm and logging units are prepared for both 'stand alone' use as in combination with the Internet Portal. To log values, the Portal is a *must*.
It's your choice. Please read more about the two possibilities.

Stand-alone vs Mobeye Internet Portal

Stand-alone

Any SIM card can be placed in the Mobeye unit. This can be prepaid or post-paid. After an alarm situation, the Mobeye notifies the preset numbers per SMS text message and/or call. Test messages and low battery warnings are received per SMS.

Mobeye Internet Portal

To register the Mobeye unit in the Portal, a Mobeye SIM card is necessary. The contract is activated on-line. Beside the stand-alone functions, it offers additional functions:

Additional information
- Management of device name and location
- Display of historical events

Additional functions
- Programming via internet
- Alarming via e-mail, SMS and call
- Log data with self-selected frequency is sent to the portal and displayed there. From the portal downloads (CSV) are possible.
- Notification if 'keep alive' message failed
- SMS or e-mail at low batteries
- Distinction between technical alerts and alarm messages
